Session 1: Write-up

Date: _____ Start: _____ End: _____

Exercise 4: Infinitely many primes of the form $4k - 1$

Minutes spent: _____

Proof. □

Why the same trick fails for $4k + 1$.

Reflection

- Which theorem or definition took longest to land, and what finally made it click?
- One thing in my proof I would lose points for:
- What I want Claude to look at specifically when grading:
